

Public Safety - Police

Communications in Tight Situations

Communication on Patrol

Remote Speaker Microphone (RSM) is a popular "essential" tool for the police force. With the radio secured on the belt or carrycase, the remote microphone provides quick access to transmission/ reception of message when worn at the shoulder or lapel. The latest Smart RSM models are designed with embedded smart chip for easy access to remote radio controls (volume, channel, programming, emergency). Regardless of user's wearing position, the RSM produces superior adaptive audio quality.

For better radio RF coverage, Motorola's range of UHF/VHF Public Safety Microphones with built-in antenna is specially designed to improve radio signal for reliable remote transmission and reception.

High Noise Solutions

Under extremely high-noise conditions where special protective helmets have to be worn, the **Ear Microphone System** (also known as **Voiceducer**) will ensure maximum clarity, as it transmits sound vibrations originating from the speaker, and not the ambient sound waves. The Ear Microphone System also offers **Voice Operated Transmission (VOX)** capability, allowing the user to transmit without pushing a button.

Advanced Solutions for Extreme Environments

By combining both transmitting and receiving functions into a single device, the **Commport Integrated Ear Microphone Receiver System** is one of the most advanced audio accessories. Designed to withstand the rigorous of police and / or military operations, rain and high temperatures, Commport's relatively small form factor makes for comfortable wear.

Accessories for police radios need to be easily accessible at all times and for any situation. Choose between a **Remote Ring PTT** for maximum accessibility, or a large **Remote Body PTT** that ensures easy activation while wearing gloves.

The raging crowd is getting angry. Using sticks, stones or anything they can get their hands on, they surge against the shields of the riot police. On the commander's orders, the 50 riot police close in on the ranks, whilst tear gas grenades was fired into the crowd. Such coordination can only come from an effective communication system that is resistant to noise and a rough environment. From beat policemen to SWAT teams, clear ommunication is vital for their own safety as well as that of the public.

Enhance Your Radio's Capabilities

A comprehensive range of accessories is available so that the radios can be customised to suit your needs. Adding the proper headsets, microphones, batteries, chargers or carry cases can enhance the productivity of the people who use two-way radios. Motorola accessories are built with the highest quality standards and are specially engineered to assure maximum performance of your radio, no matter what profession you're in.

Long-Lasting Duty

Because law enforcement is a 24-hour business, Motorola's **Multi-Unit Chargers** that charges up to six portable radios at a time ensuring seamless communications anytime of the day.

Covert Communications

Discretion is key for bodyguards as well as plain clothes policemen. Motorola's **Surveillance Kits** are designed to be inconspicuous and easily camouflaged (beige or black). The clear acoustic plastic tube earpiece is hardly visible, perfect for investigators who need to blend into their surroundings and yet be in constant communications with headquarters. With a choice of **1-wire kits** (receive transmission only), **2-wire kits** (send and receive) and **3-wire kits** (with separate microphone, earpiece and palm PTT), users will be able to find a kit that best fits their needs.

Covert security personnel would also appreciate the **Wireless Discreet Earpiece**, where contact is made without any visible wires or devices. A small receiver inserted in the ear is all it takes. The earpiece is compatible with existing Motorola surveillance kits.

In-Vehicle Solutions

Alternatively, **In-Vehicle Chargers** can be adopted to charge and prime the radio batteries while on the move. Choose either the **Basic Travel Charger** (a 2-in-1 eliminator and charger) to power the radio via the vehicle's battery or the sophisticated **Vehicle Adapter**. The adapter can transform the portable radio into an in-vehicle mobile, complete with hands-free capabilities. Your police force gains greater efficiency with on-the-road coordination capabilities with Headquarters and between squad cars.
